

FOOT LEVELERS CUSTOM ORTHOTICS

For over 66 years, Foot Levelers has helped patients like you live healthier and more active lifestyles.

Even though all your body parts are connected and affect one another, your feet are what we at Foot Levelers call, the "foundation". Your entire body is supported and balanced by your feet. Therefore, if your feet are pronated (as 99% of all people's feet are), your body will suffer – starting with either the knee, hip, or back.

Foot Levelers custom orthotics are individually designed for your feet – helping achieve a balanced foundation and stabilized pelvis. Our custom orthotics are handmade for your unique feet based on 3D scans or casts, and your doctor's exam.

Only Foot Levelers custom orthotics support all 3 arches of the foot, which make up the plantar vault. Since our orthotics are custom-made by hand from scans, no two pairs of Foot Levelers custom orthotics are alike!

Innovations like 3-Arch Support, and high quality materials and scanning technology, enable a uniqueness to each orthotic – shaped and crafted to your individual feet – resulting a much higher-quality orthotic that also happens to be extremely effective in reducing low back pain and other forms of pain typically related to foot conditions.

Our orthotics are proven to reduce Low Back Pain by 34.5%*.

WHY GET YOUR FEET SCANNED?

1/4

of the body's bones
are in the feet

1%

percentage of the
population with an
'optimal' foot

99%

percentage of the
population that
pronates or supinates

5,117

average
number of
steps taken on
a daily basis

Problems in the feet = problems in the body

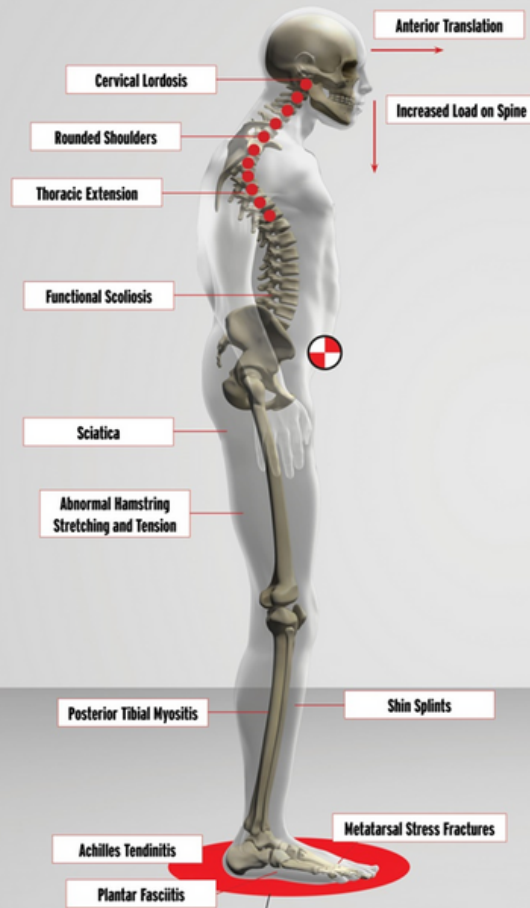

Scanning points out the problem areas and shows how
custom-made orthotics can help.

Foot-Spine Connection

Faulty foot biomechanics negatively impact all supporting joints above the foot.

An Unstable Foundation

Lack of stability in the feet can lead to distortions all the way up the spine.

Stability Achieved!

Custom orthotics can restore balance by providing support for the collapsed structures in the feet, creating a sturdy base for the Kinetic Chain.
